Subject  Film Processor

STAT

Gentlemen:

We would like to take this opportunity to present a processor development program utilizing the   principle. We have completed 16/35mm prototypes of processors incorporating this technique with, in the opinion of all observers, tremendous success, and now contemplate extending this innovation to wide film processors.

STAT  
STAT

Therefore, we propose to undertake a study and breadboard testing program as well as prototype development of a 70 through 9-1/2 inch  processor. This endeavor would be effected in accordance with the enclosed technical proposal and shows great promise of bringing about a new era in photographic processing. Our proposal is based on a CPFF contract with a 14 month delivery schedule at an estimated cost
